

Colorado SB26102 (Kipp/Brown): One Page Community Summary

Senate Bill 26102 focuses on strengthening oversight, transparency, and planning requirements connected to large scale infrastructure and development impacts. The bill emphasizes coordination between state agencies, utilities, and local governments to protect ratepayers, support responsible growth, and address environmental and community impacts.

Key Provisions

- Requires additional coordination between utilities, regulators, and local governments for major infrastructure demand.
- Strengthens planning requirements to evaluate long term impacts on electric reliability and consumer costs.
- Improves transparency through reporting and oversight mechanisms.
- Encourages responsible development aligned with state environmental and resource management goals.

Consumer Protections

- Evaluates whether new large developments create unreasonable cost burdens for ratepayers.
- Supports long term grid planning to reduce sudden electricity rate increases.
- Improves oversight of infrastructure investments tied to large energy users.

Environmental Considerations

- Encourages efficient energy use and resource planning.
- Supports coordination with environmental and natural resource agencies.
- Promotes long term sustainability considerations during project approvals.

Potential Benefits

- Improves transparency and planning for large infrastructure projects.
- Helps protect consumers from unexpected utility cost increases.
- Supports coordinated economic development.

Potential Concerns

- May increase regulatory complexity or approval timelines.
- Implementation details will depend on agency rulemaking and enforcement.

Key Question for Communities: Does the project balance economic development with long term impacts on utilities, taxpayers, and natural resources?
